

# SPECIALTY KITS

Professional Two Way Radio Accessories

**2FSTM**

### Fire Service Throat Microphone

The 2FSTM is a two wire kit with a throat microphone and an air tube receiver. It is packaged with an appropriate MWPTT Push-To-Talk switch. Perfect for Fire Service applications where breathing apparatus is used.

**2TM**

### Throat Microphone

The 2TM is an excellent choice for high noise areas and compatible with all breathing apparatus. The audio is transmitted via the vibrations in your throat. The unique dual element design eliminates the need of critical placement on the throat as with traditional designs.

**5HKB**

### Helmet Kit - Electret

The 5HKB is a dual speaker helmet kit with an electret microphone. This is compatible with our range of WPTT Push-To-Talk assemblies. For specialty applications our aviation leads are also compatible. The speakers are enclosed in a low profile cloth housing that includes Velcro for helmet mounting. These are a perfect choice for motorcycle, gliders and riot police applications.

**5HKTm**

### Helmet Kit - Throat Microphone

The 5HKTm is a dual speaker helmet kit with a throat microphone. This is compatible with our range of WPTT Push-To-Talk assemblies. The speakers are enclosed in a low profile cloth housing that includes Velcro for helmet mounting. These are a perfect choice for motorcycle, gliders and riot police applications. Also compatible with all breathing apparatus.

**11ES**

### Earspike

The 11ES transmits your voice by amplifying the air pressure that is transmitted from the ear canal every time you speak. Received audio is via the same transducer as the transmitted. Very good for discreet applications where only a whisper can be tolerated. Useful for discreet communications. This is not intended for high noise environments.

**11FSES**

### Regalis

The McKay Regalis is an bone conduction microphone system especially useful for applications in the fire service where breathing apparatus is used. The comfortable earpiece is inserted to the ear canal and both received and transmitted audio is via the ear canal. By far the best and versatile system for Fire Service applications.

**RK**

### Referees Kit

The RK is a two wire kit with an electret collar mount microphone and an air tube receiver. This comes packaged with one of our MWPTT Push-To-Talk switches. This is a perfect accessory for referees, the PTT is usually worn on their belt so it is easy to find.

**SPECIALS**

### Specialty Accessories

We specialise in production from the drawing board to manufacture. We can offer OEM and ODM services for a wide range of products for two way radios and mobile telephones. If you have any specific requirements give us a call to discuss your needs.
